ULTRA SLOW MOTION

Slow down time, down to the time-resolution equivalent of **over 200,000+ frames per second**, **live**, while generating orders of magnitude **less data** than traditional approaches.

Understand the **finest motion dynamics** hiding in ultra fast and fleeting events.

Up to **200,000 fps** (time resolution equivalent)

OBJECT TRACKING

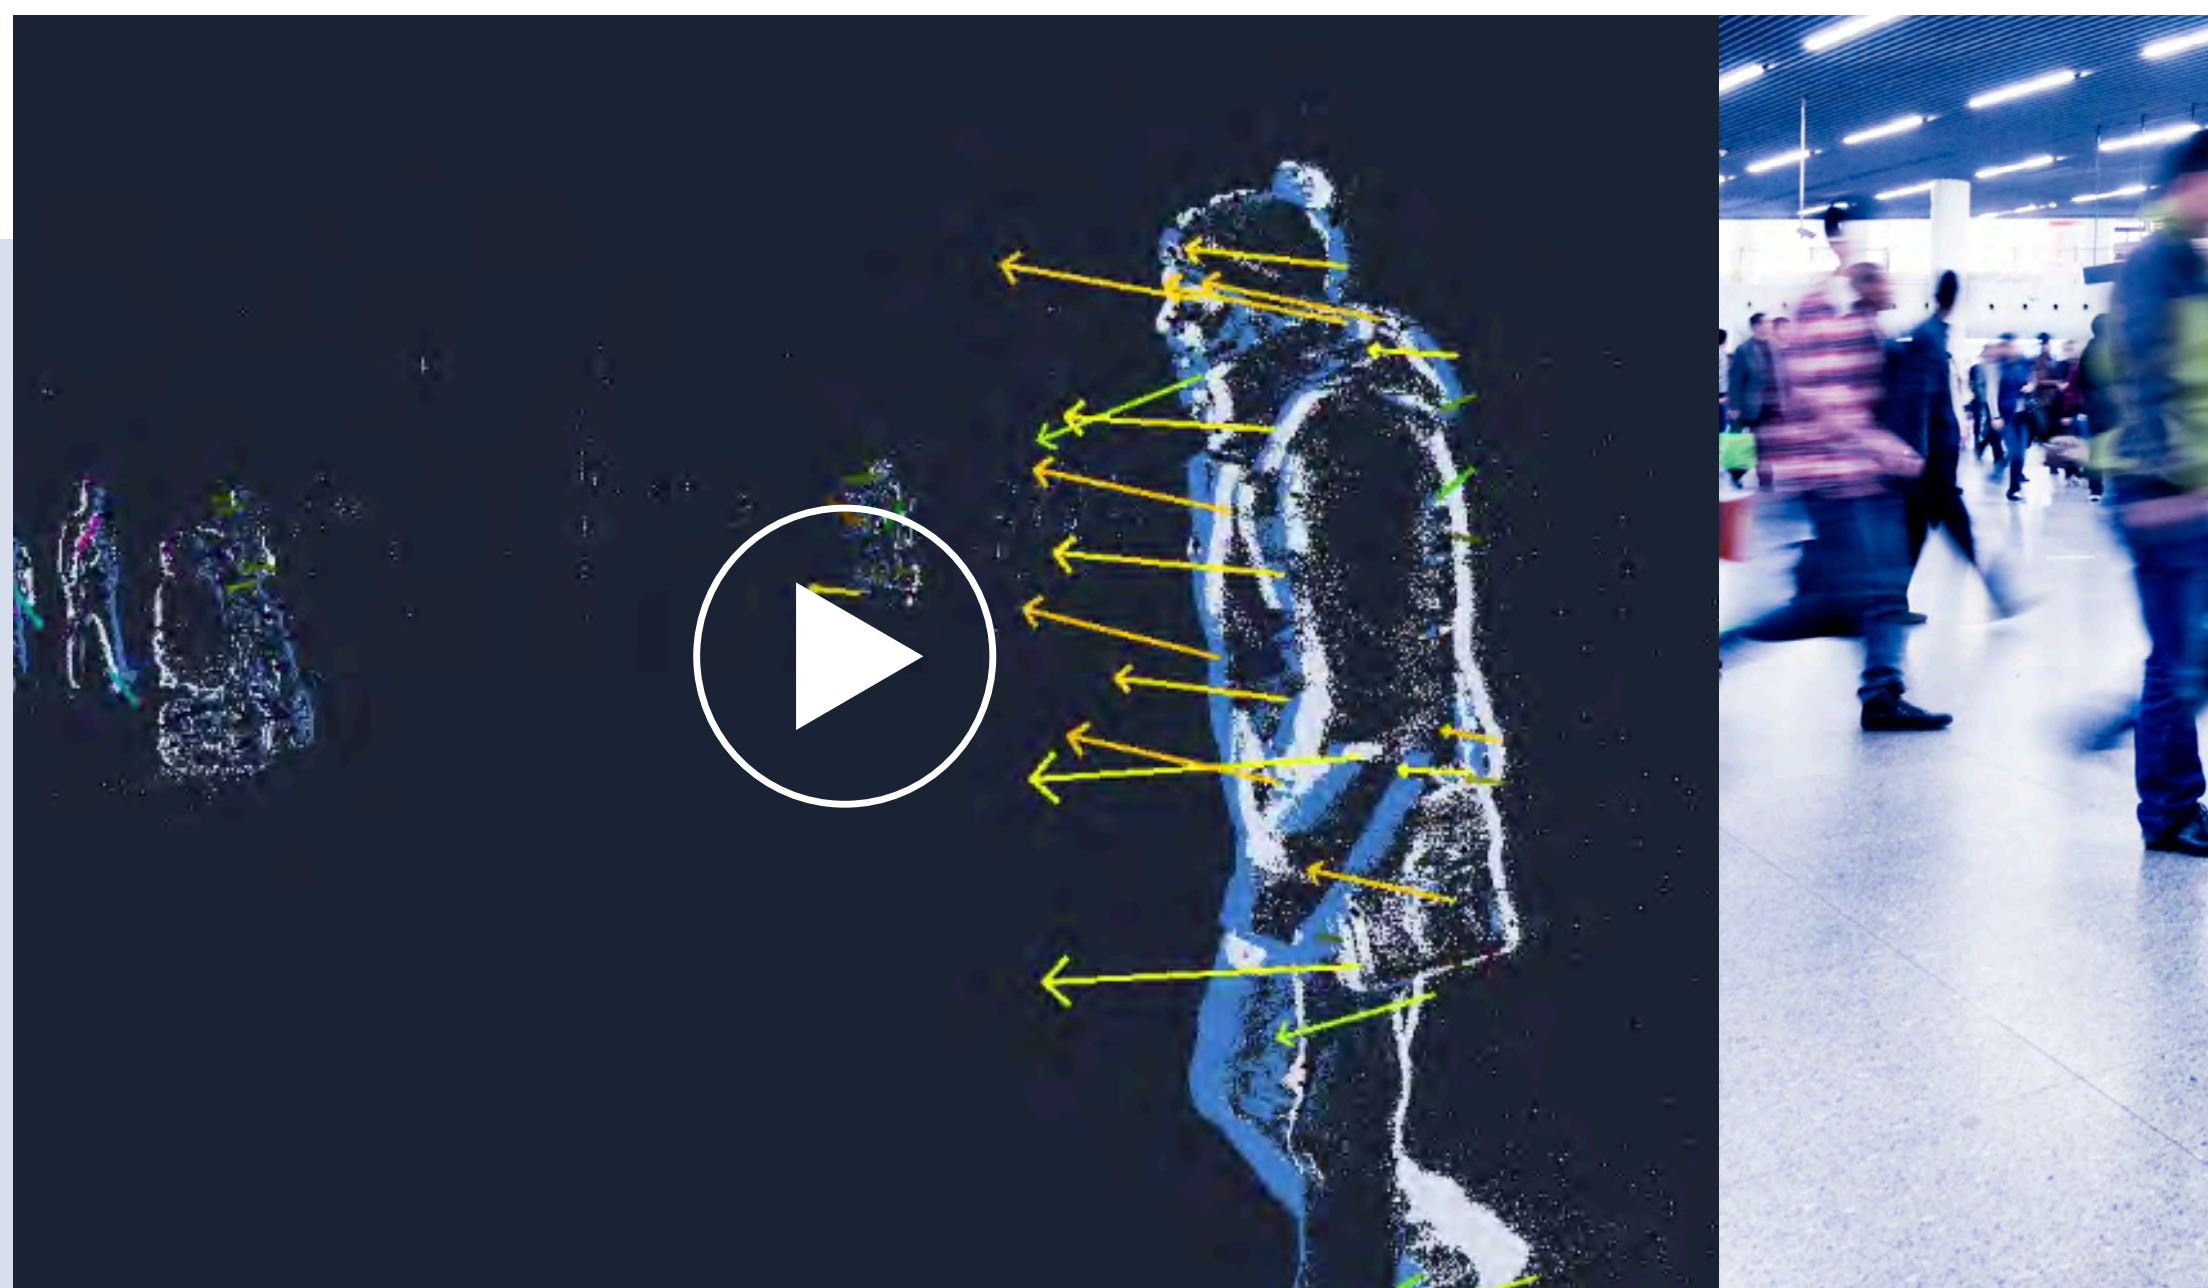

Track moving objects in the field of view. Leverage the **low data-rate and sparse information** provided by event-based sensors to track objects with **low compute power**.

Continuous tracking in time: no more "blind spots" between frame acquisitions

Native segmentation: analyze only motion, ignore the static background

OPTICAL FLOW

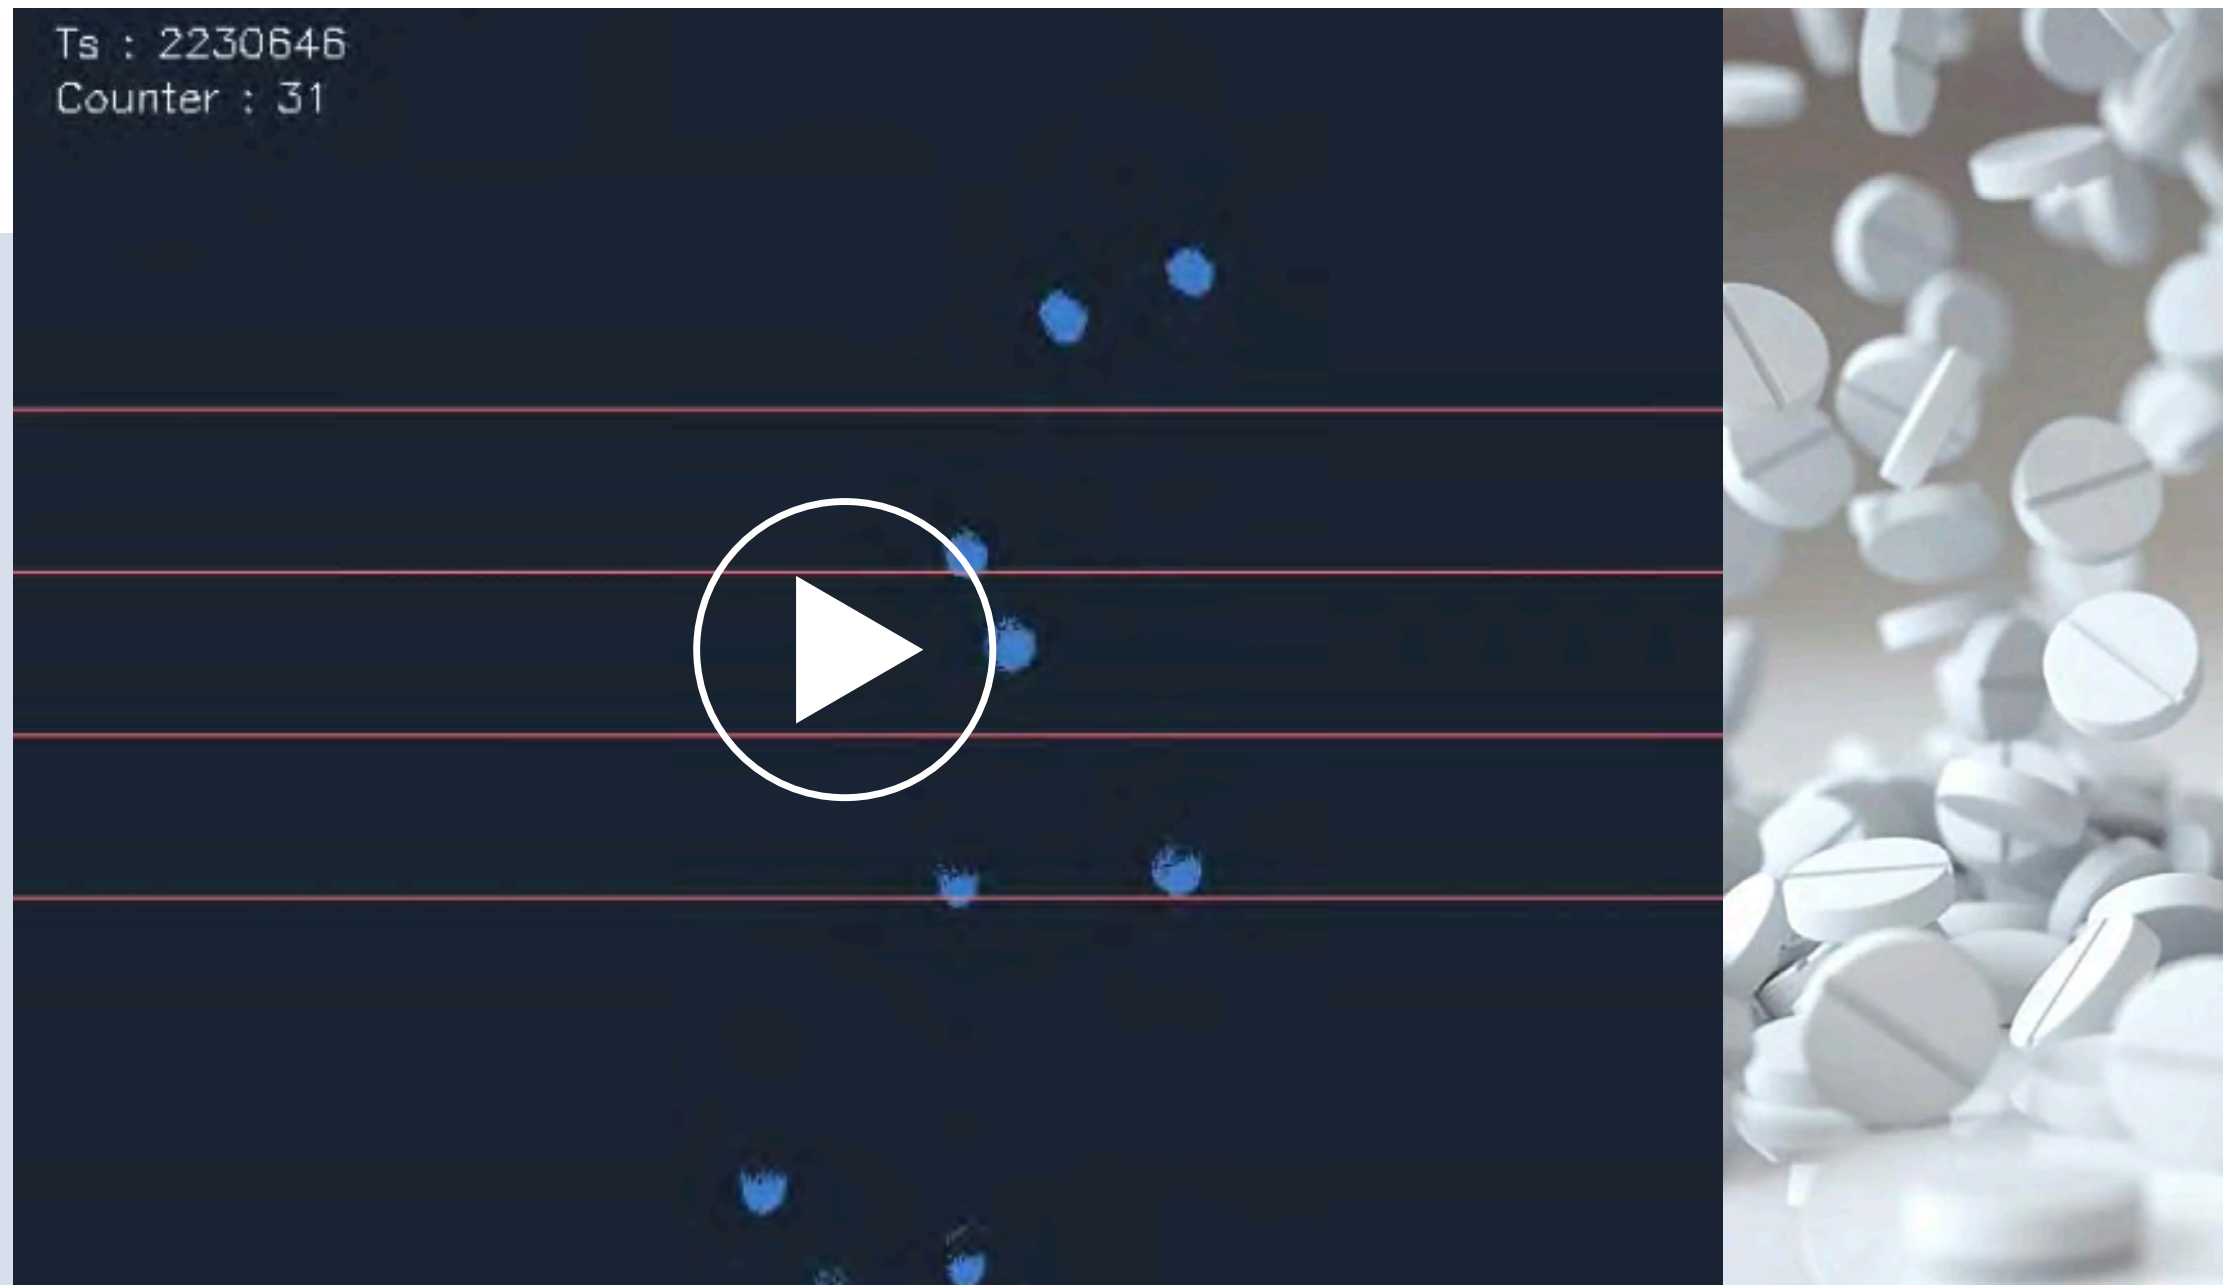

Rediscover this fundamental computer vision building block, but with an event twist.

Understand motion much more efficiently, through continuous pixel-by-pixel tracking and not sequential frame by frame analysis anymore.

17x less power compared to traditional image-based approaches
Get features **only on moving objects**

HIGH-SPEED COUNTING

Count objects at unprecedented speeds, high accuracy, generating less data and without any motion blur.

Objects are counted as they pass through the field of view, triggering each pixel independently as the object goes by.

>1,000 Obj/s. Throughput
>99.5% Accuracy @1,000 Obj/s.

VIBRATION MONITORING

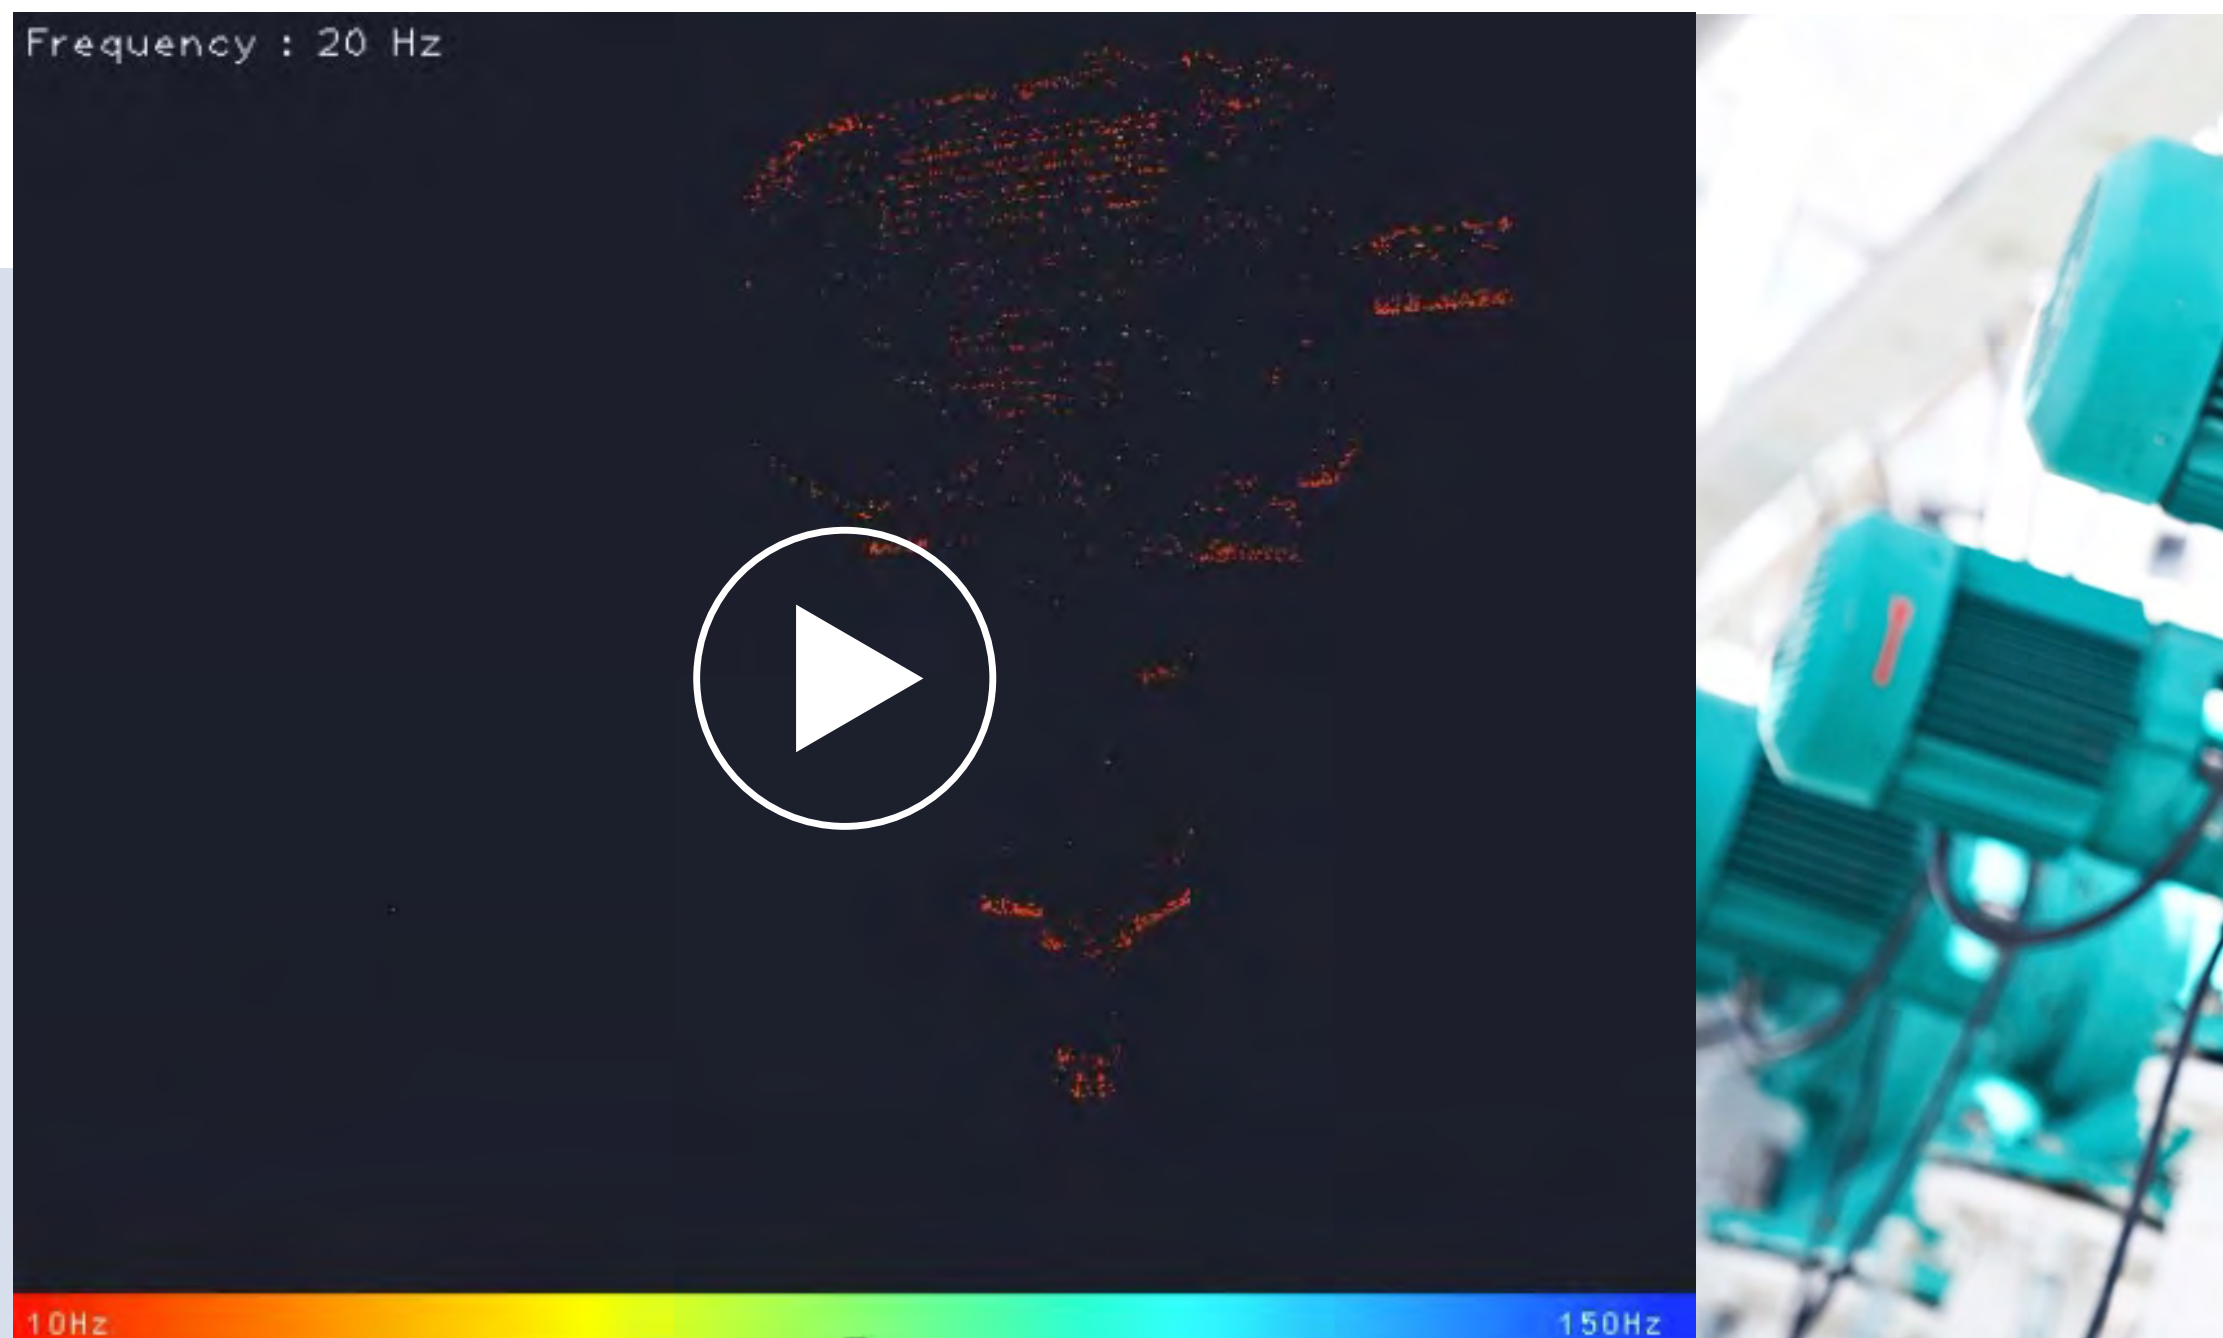

Monitor vibration frequencies continuously, remotely, with pixel precision, by tracking the temporal evolution of every pixel in a scene.

For each event, the pixel coordinates, the polarity of the change and the exact timestamp are recorded, thus providing a global, continuous understanding of vibration patterns.

From **1Hz to kHz** range

1 Pixel Accuracy

1 sensor = **300,000+** independant measuring points

HIGH-SPEED PLUME MONITORING (Aerosols-Spray)

ULTRA-SLOW MOTION

OPTICAL FLOW

Real time analysis and monitoring of spray dispensing of fluids.

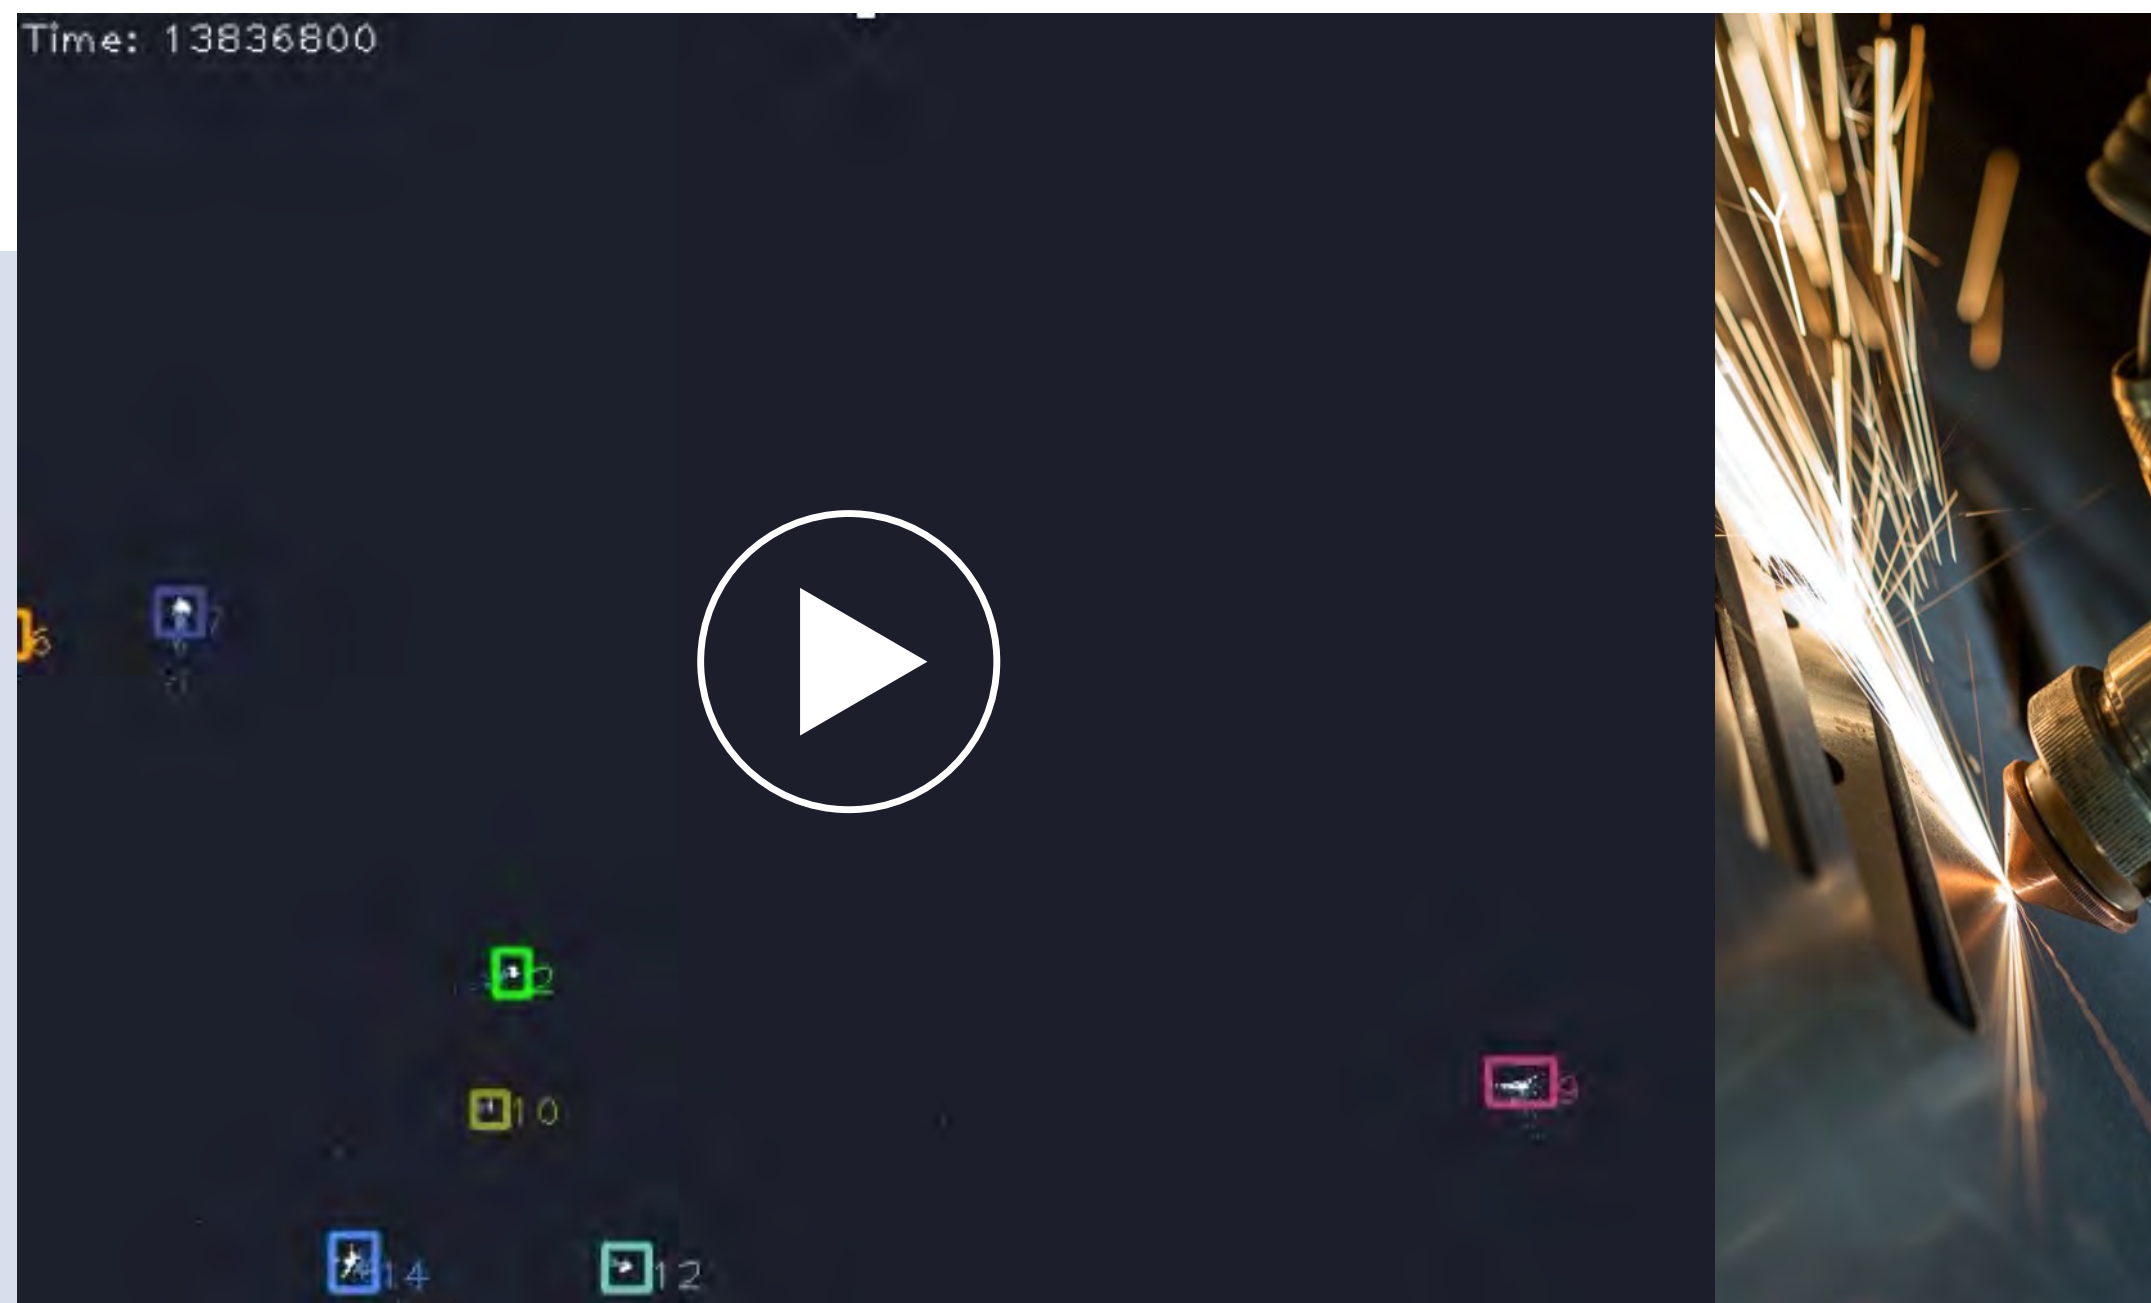

Ultra slow-motion view (200.000 equiv. f/s) for homogeneity and optical flow for direction and velocity of plume & PIV.

Typical use cases: Dispensing uniformity & Coverage control, Quality & efficiency of dispersion, Fluid dynamics analysis for inline process monitoring

SPATTER MONITORING

Track small particles (typ. size 10pixels) with spatter-like motion.

Thanks to the **high time resolution** and **dynamic range** of our Event-Based Vision sensor, small particles can be tracked in the most difficult and demanding environment.

Up to **200k fps rendering** (5 μ s time resolution)
Simultaneous XYT tracking of all particles

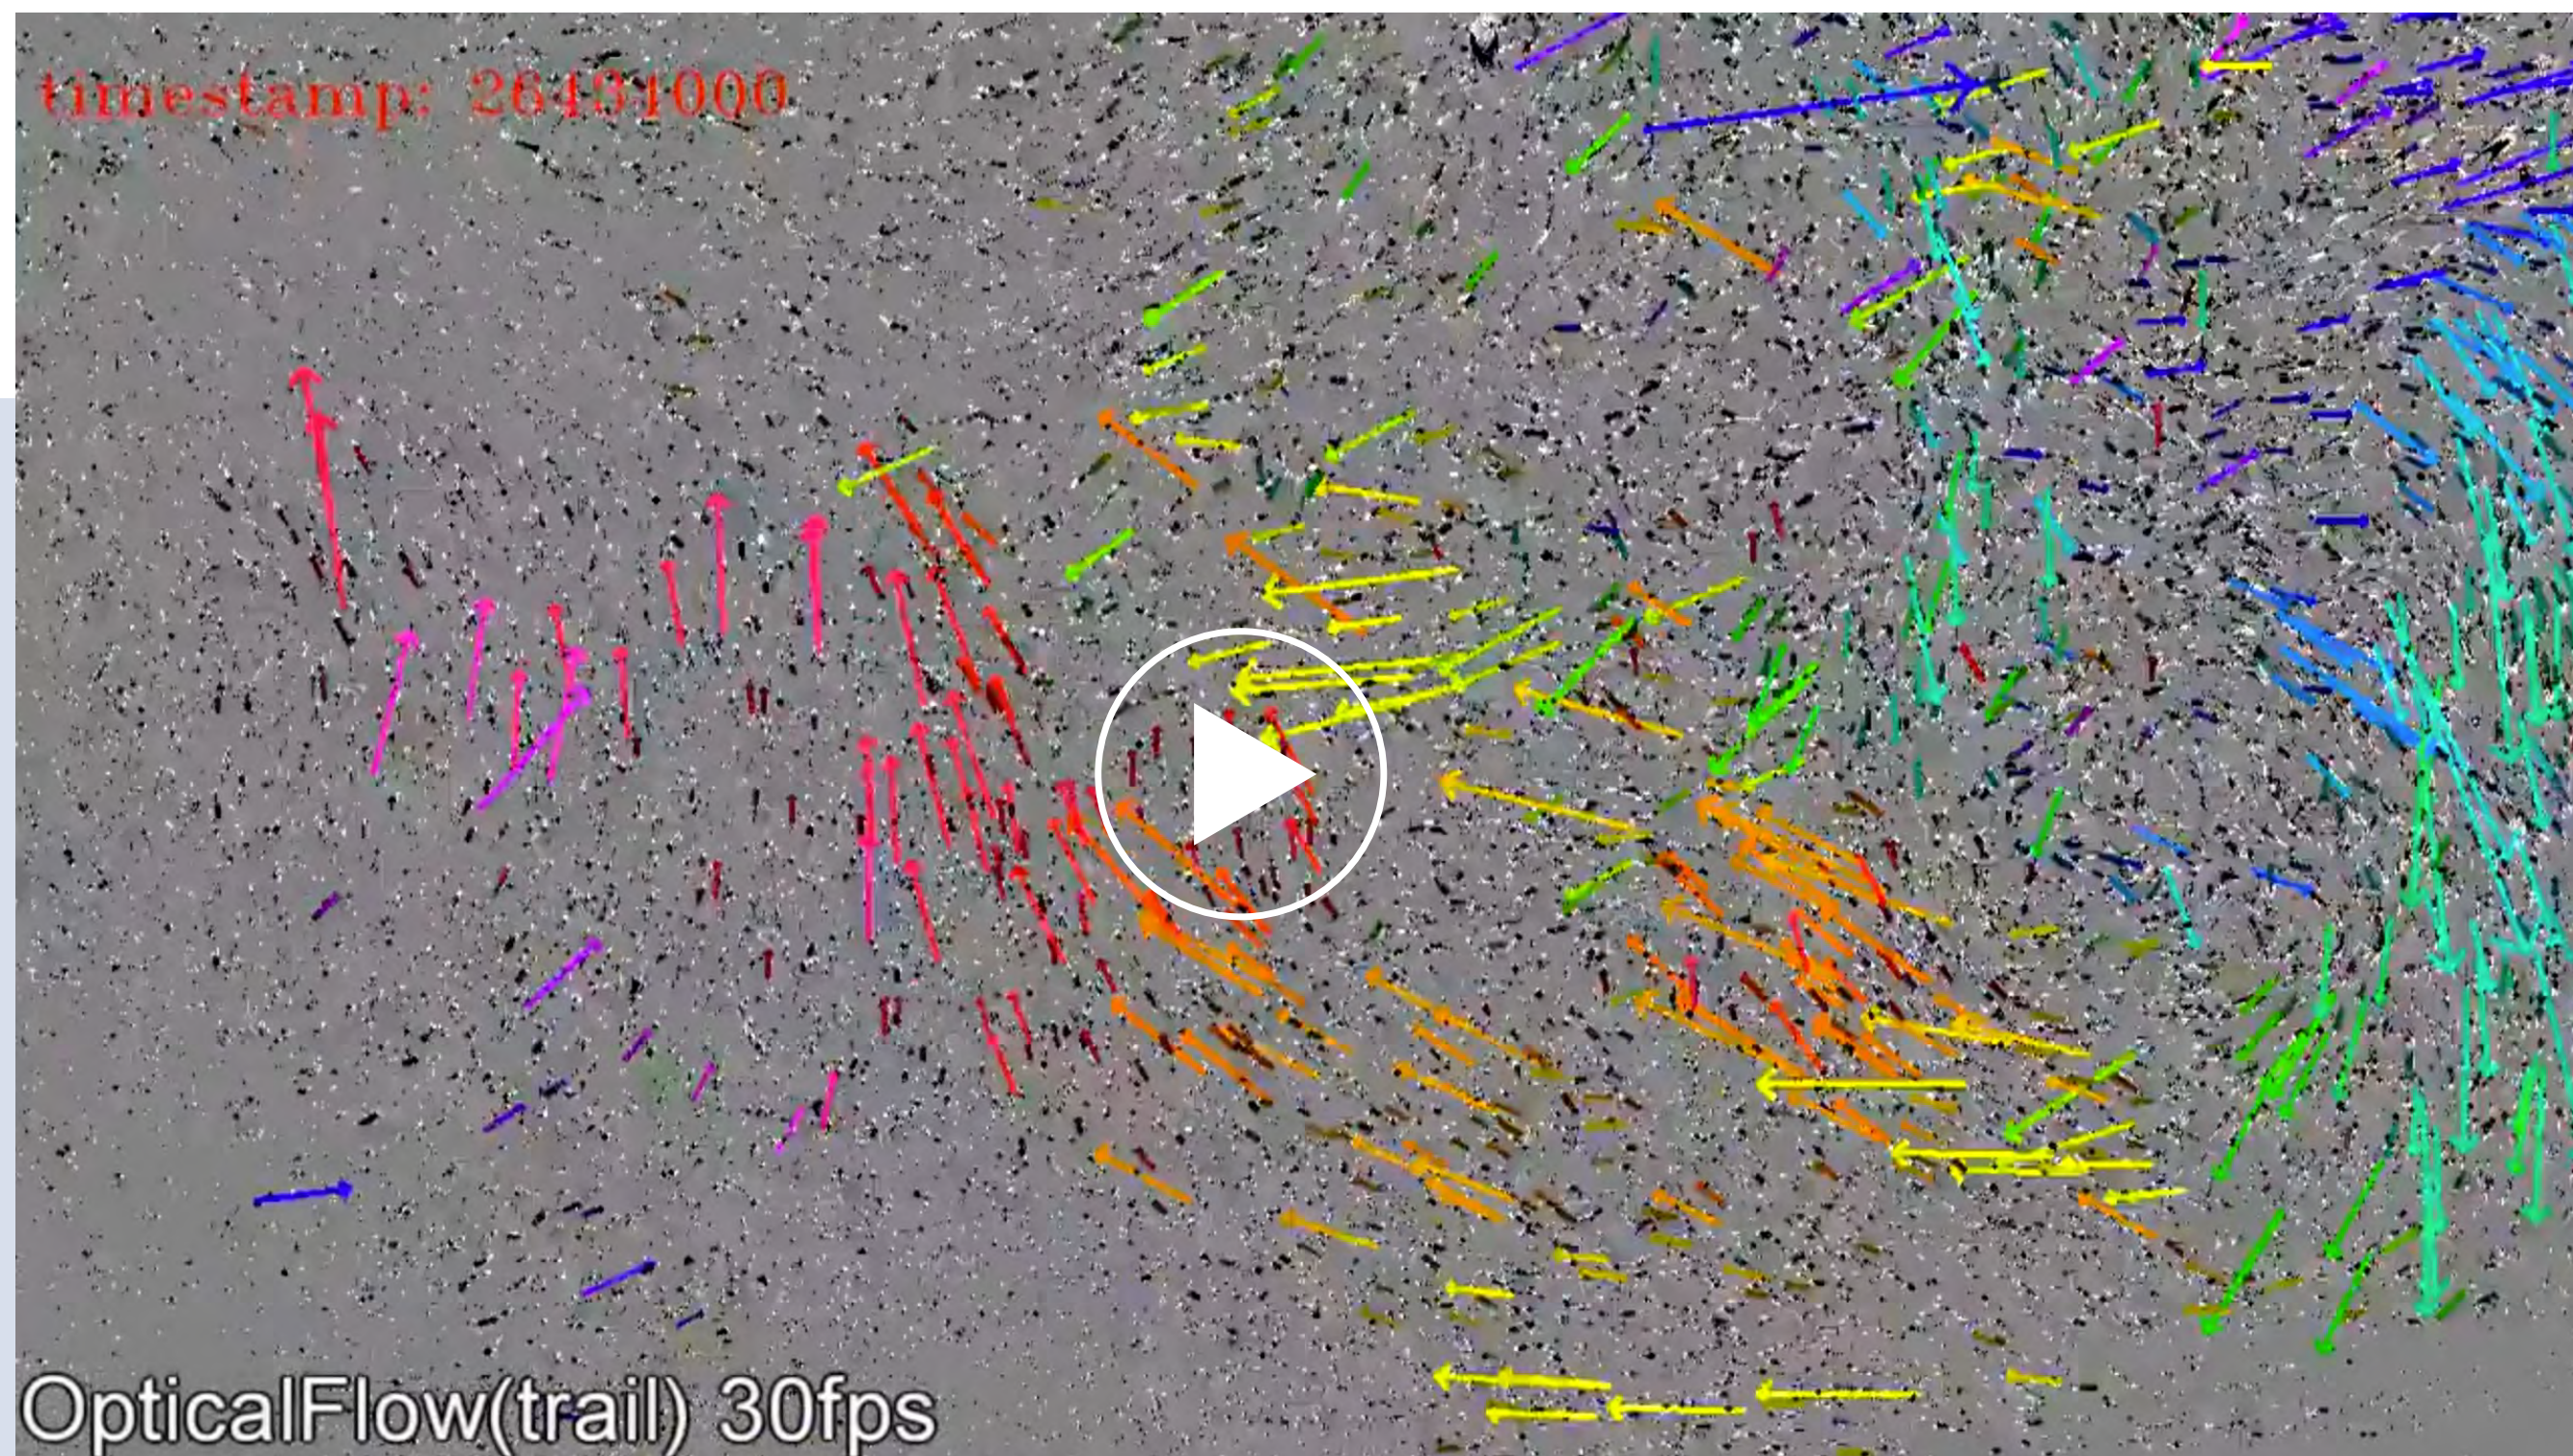

CABLE VELOCITY & SLIPPING MONITORING

Typical use cases: Yarn quality control, Cable manufacturing monitoring

VELOCITY & FLUID DYNAMICS MONITORING

Typical use cases: Fluid dynamics monitoring, Continuous process monitoring of liquid flow

MACHINE LEARNING - *INFERENCE*

Unlock the potential of Event-Based machine learning, with a set of dedicated tools providing everything you need to start execution of Deep Neural Network (DNN) with events.

Leverage our pretrained automotive model written in pytorch, and experiment live detection & tracking using our c++ pipeline. Use our comprehensive python library to design your own networks.

Pretrained network trained on a 15h and 25M labels automotive dataset

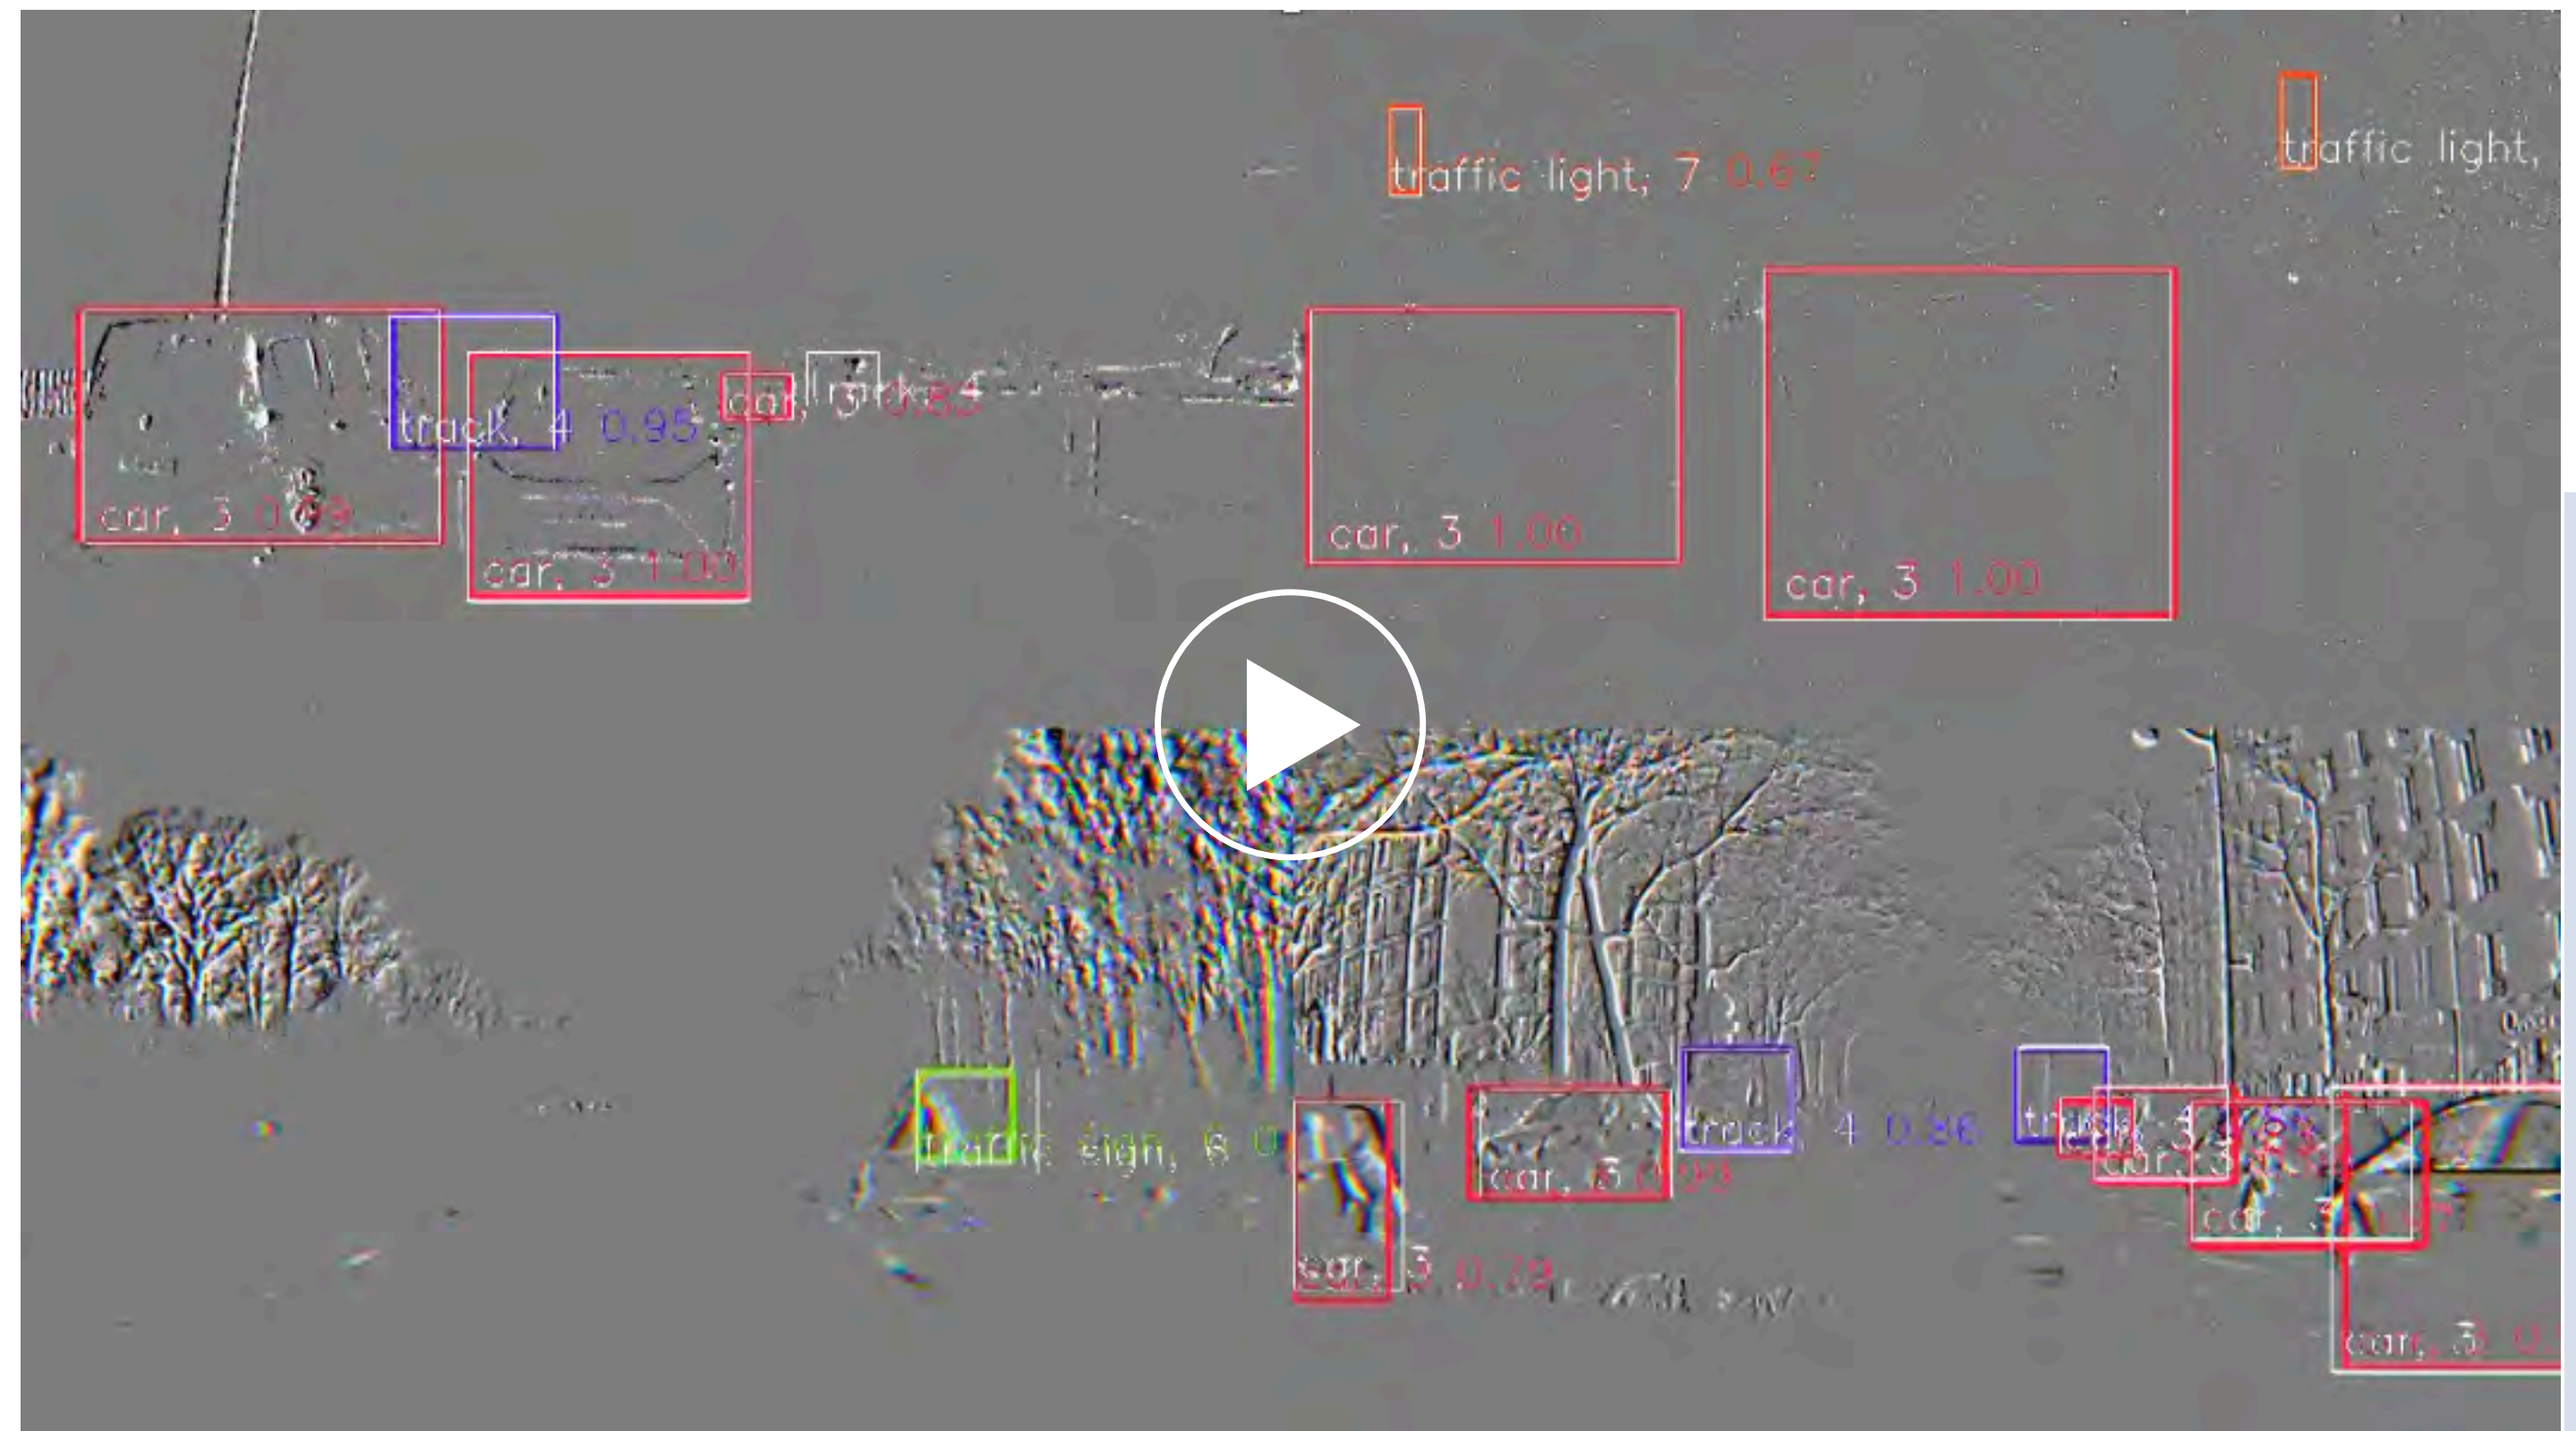

Live detection and tracking **@100Hz**

MACHINE LEARNING - TRAINING

Train your own Object Detection application with our ready-to use training framework. Explore Event-Based Tensor representation, and train network topology suited for event-based Data

- 4 pre-built tensor representation
- Automated HDF5** dataset generation
- Comprehensive training toolbox**, including pretrained network, dataset, and more

COMING SOON

PROFESSIONAL

SIMULATOR

EVENT SIMULATOR

Bridge frame-based and event-based worlds with our events- simulator.

Generate synthetic data to augment your dataset, and partially reuse existing references.

Off the shelf, ready to use Event simulator

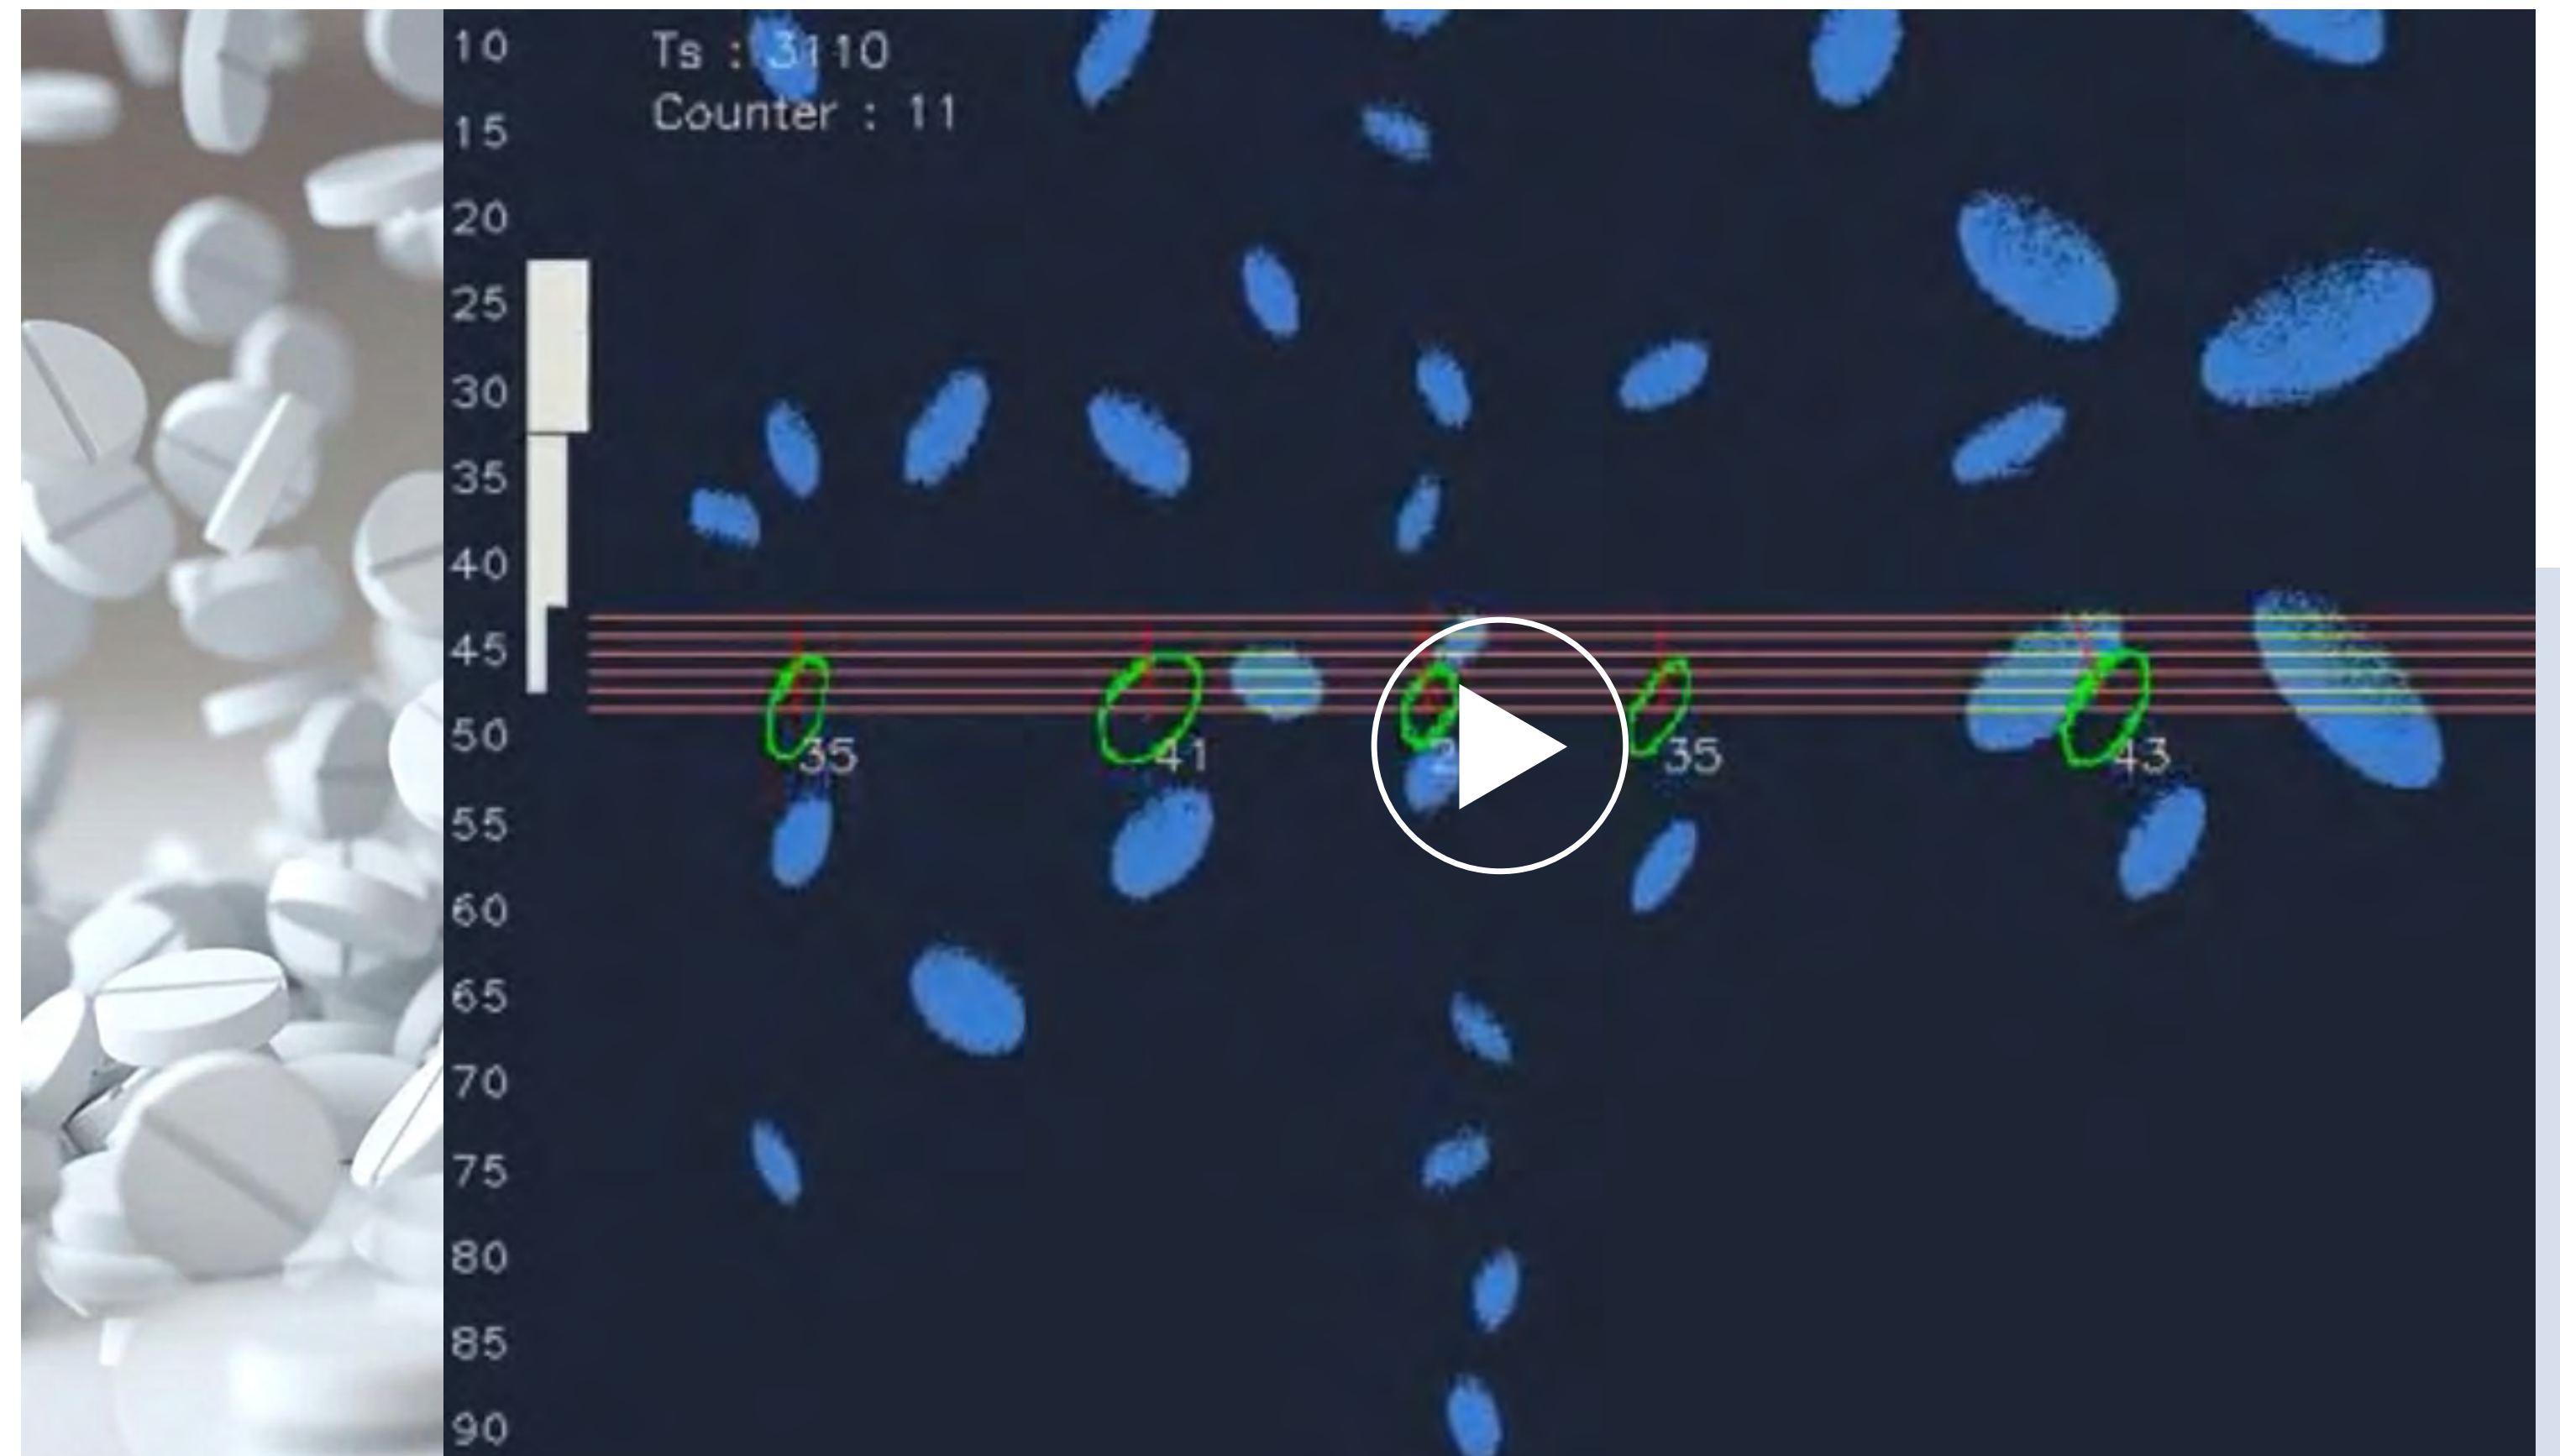

PARTICLE/OBJECT SIZE MONITORING

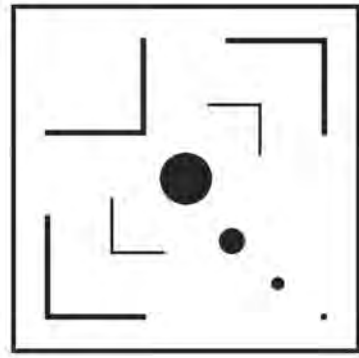

Control, count and measure the size of objects moving at very high speed in a channel or a conveyor. Get instantaneous quality statistics in your production line, to control your process.

Up to 500 000 pix/s speed
99% counting precision

Typical use cases: High speed counting, Batch homogeneity & Gauging

COMING SOON

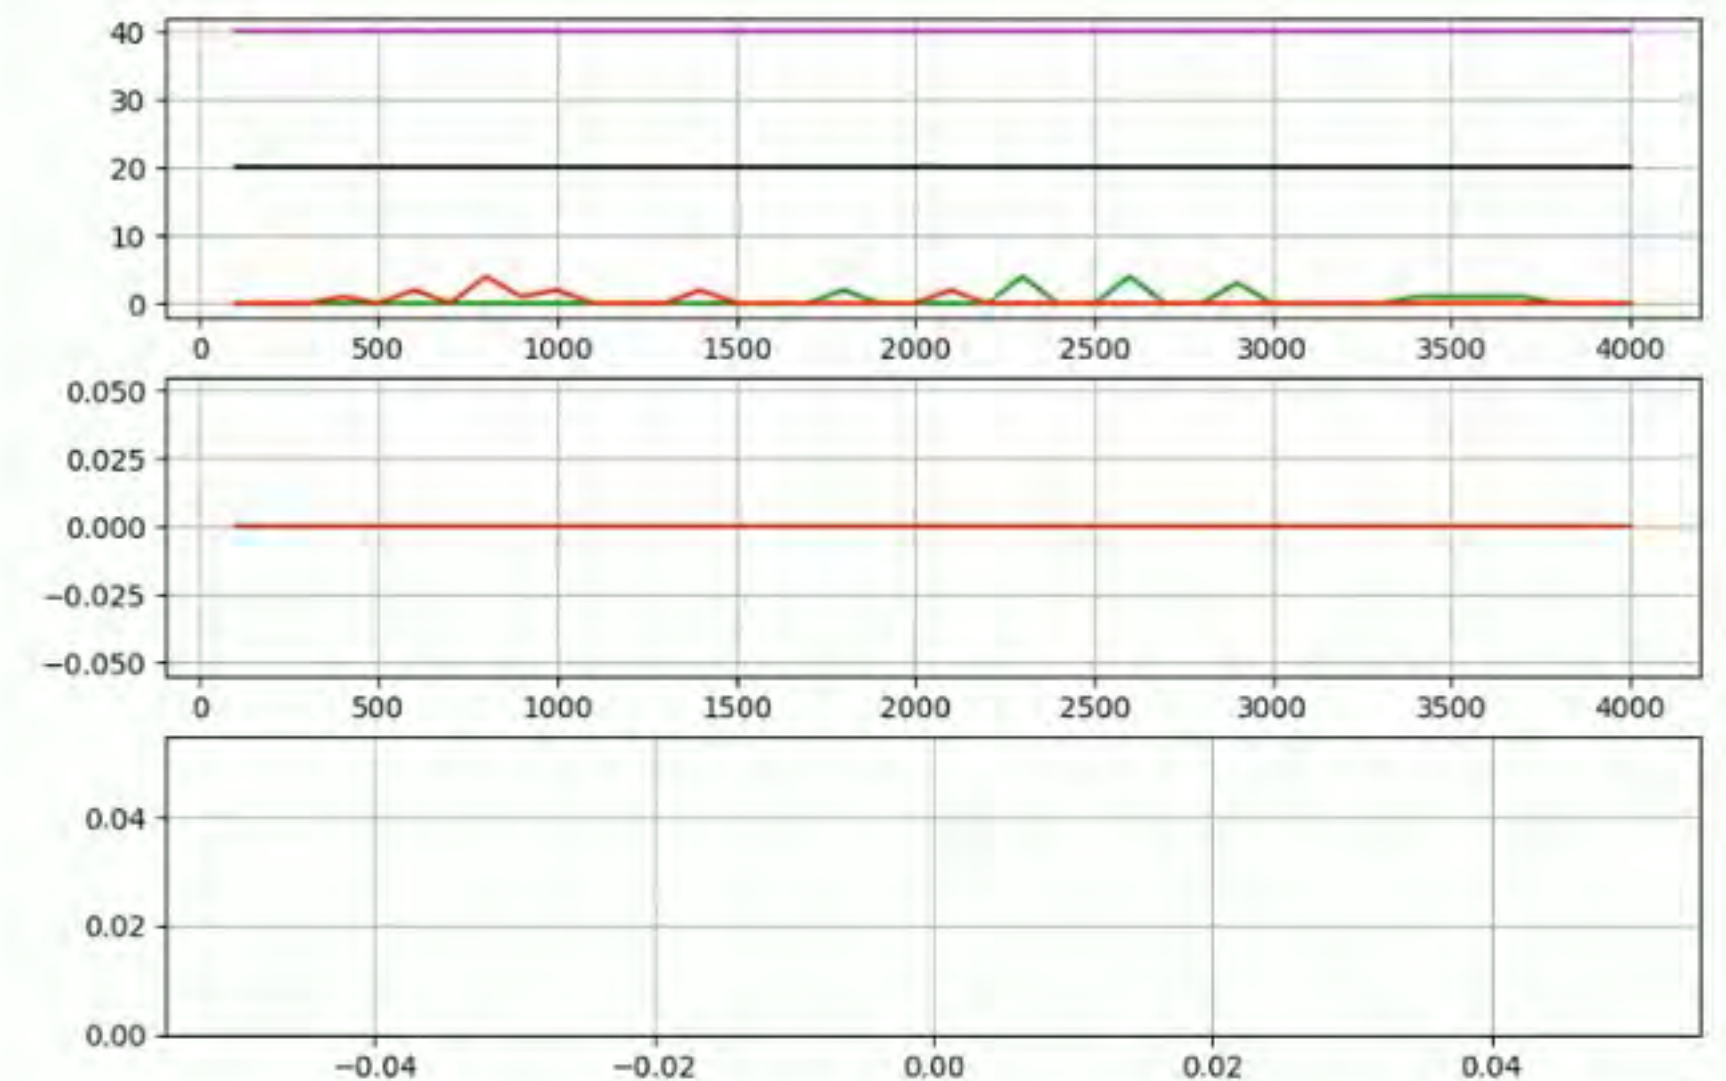

Control the quality of your liquid dispensing industrial applications in real time, improve the cadence and facilitate the maintenance.

Detect and count high speed jets, with unparalleled accuracy

Up to 500 Hz jet dispensing

Generate alarms automatically when error occur on dispenser

JET MONITORING

Typical use cases: Trajectory & consistency for inline process monitoring

EDGELET TRACKING

Track 3D edges and/or Fiducial markers for your AR/VR application. Benefit from the high temporal resolution of Events to increase accuracy and robustness of your edge tracking application

Automated 3D object detection, with geometrical prior
3D object real-time tracking
